* Sin anillo (no requerido)

* Debido al proceso de manufactura el tapon no se clasifica en CLASES ya que el tapon se moldea de manera general a partir de placa de PVC la cual se obtiene de la misma tubería mediante un proceso de termoplanchado, posteriormente se termoforma en un molde estandar produciendo el diámetro interno y forma necesaria para acoplarse en las espigas de la tubería según el diametro externo de la tubería, que en todas las CLASES es igual ya que lo que varia es el espesor de pared del tubo y el diametro Interior del mismo.

Por lo anterior no es posible determinar series en los tapones, sin embargo esta pieza al ir cementada sobre el tubo Clase 5, Clase 7, Clase 10 o Clase 14 obtiene soporte y rigidez del mismo tubo, la misma tapa aplica para las cuatro CLASES de tubería hidráulica métrica, sin embargo podemos ofrecer tapas con láminas o placas internas para refuerzo adicional, consulte precios.
